Two professionals for professionals

Reliable in any situation

Flexible range of applications and excellent operating efficiency. Equipped with Power Link Plus, both the PK 30002 and PK 33002 EH show that they can not only tackle but also solve difficult tasks. Even in extremely tight spaces. The proven E-HPLS technology combines power, comfort and safety. Make its diligence your strength!

First-rate in design and performance

Power Link Plus

This knuckle boom, specially developed by PALFINGER which can be angled upwards stands out by virtue of excellent movement geometry. Even in the tightest spaces difficult crane jobs can be performed with precision.

Maintenance-free extension system

With the maintenance-free extension system PALFINGER sets a clear path in easy servicing. The use of sliding elements made of special plastic in combination with the proven KTL cathodic dip painting means that the extension boom system no longer has to be serviced by the operator. This not only saves time and expense but also protects the environment.

Control console

All important information about the crane can be seen on the main control stand. A digital indicator counts and displays the operating hours. Ergonomic control levers and the optional lighting package provide increased safety and comfort even in poor visibility conditions.

Functional Design

Functional Design elements increase working comfort, protect against damage and make servicing and maintenance easier. The spiral tube hose optimally protects the hydraulic hoses from environmental influences, damage and dirt. Thanks to the patented interlock system, the crane is equipped with an innovative outrigger safety system for manual stabilizer supports.

Lighting package (optional)

The control stand is supplied on request with LED illumination and backlit symbols. LED warning lights are fitted on the outriggers to provide better visibility.

Radio remote control

Radio remote control with digital data transmission (standard on EH models) offers maximum efficiency and comfort. The display integrated in the handset informs the crane operator continuously about the current capacity loading level of the crane.

PALTRONIC 50

Modern electronics in the increasingly complex crane system offers safety and comfort functions which make the crane operator's work easier and increases the efficiency of the crane job.

Its diligence. Your strength.

Outrigger system

All the outriggers are fitted as standard with a ball-jointed support plate that can be swivelled through 10°. This enables them to adapt optimally to the ground. The enlarged plate also reduces the pressure on the ground. Three possible hydraulic stabilizer widths: 5.6 / 6.6 / 7.4 m. The crane's stabilizer cylinders can be pivoted fully hydraulically upwards through 180° (optional equipment).

Load-holding valve

They prevent the crane boom from dropping and are fitted as standard on all slewing, lifting, knuckle-boom and extension cylinders. The valves are positioned in such a way that they are protected against damage.

Hose equipment for auxiliary equipment

Hoses providing oil supply for auxiliary equipment are routed in compact trays and protective chains. A clean design offers maximum service life. There is also an optional solution with hose drum on the main boom with the hoses guided on the inside in the extension system for protection.

Return oil utilisation

The high speed of the extension system is impressive. It results from return oil utilisation, which is installed as standard, and the generously dimensioned hydraulic lines. This increases efficiency in all types of applications!

KTl – the cathodic dip painting

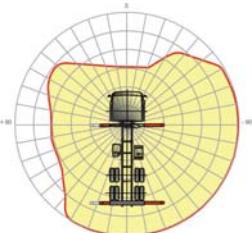

The shot-blasted crane parts are covered in zinc phosphate in an immersion process and coated electro-statically. The subsequent two-component top coating of paint provides a surface protection which in the past was usually only found in the automotive industry.

HPSC*

The High Performance Stability Control System (HPSC) monitors the stability of the crane vehicle. Sensors for proportional length measurement located in the stabilizers make their positioning fully variable. As a result, it is possible to calculate the permissible working range for any stabilizer situation. The integrated real-time data algorithm ensures optimum utilization of the lifting power at every point of the stability curve.

* HPSC or an alternative system for monitoring stability is mandatory in the version compliant with EN12999:2011.

HPSC
monitored

AOS (optional)

The Active Oscillation Suppression system available exclusively from PALFINGER compensates for jolts and sharp stress cycles caused by crane operation. Because oscillations are eradicated the crane can work with precision, much faster and therefore more cost-efficiently.

PK 33002 EH High Performance

Max. lifting capacities

A

Max. lifting capacities		10000 kg	22040 lbs
Outreach	Capacity		
4,1 m	13' 5"	7400 kg	16300 lbs
